

PATENT

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

means for recognizing said machine recognizable feature and a means for transmitting a coded signal in response to the recognition of said machine recognizable feature;

an intelligent controller having associated therewith a means for accessing said programming material in response to receiving said coded signal; and

a display unit for presenting said programming material.

183. A system as defined in claim 179 wherein said "information superhighway" data link comprises an integrated service digital network (ISDN).

185. A system as defined in claim 179 wherein said "information superhighway" data link comprises a cable television (CATV) line.

{EDITED VERSION OF THE AMENDED CLAIMS}

168. A system for displaying programming material to a user, the system comprising:

a printed photograph having at least one machine recognizable feature;

PATENT

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

a feature recognition unit having associated therewith a means for recognizing said machine recognizable feature and a means for transmitting a coded signal in response to the recognition of said machine recognizable feature;

an intelligent controller having associated therewith a means for accessing said programming material in response to receiving said coded signal; and

a display unit for presenting said programming material.

183. A system as defined in claim 179 wherein said "information superhighway" data link comprises an integrated service digital network (ISDN) [network].

185. A system as defined in claim 179 wherein said "information superhighway" data link comprises a cable television (CATV) line.

REMARKS

The Examiner objected to claims 183 and 185 based on informalities. In addition, the Examiner provisionally rejected claims 168-220, 242-245, and 253-289 under obviousness-type double
